

The test

*Each country held out in turn.
73,254 diaries.*

Result: the model does not beat reweighting

**Worse in 9 of 9 cells:
1.1 to 3.9 times the error**

Also misses the 15 % bar on its own training countries (33 to 158 %); real diaries meet it (5 to 12 %)

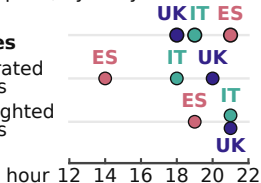

For building energy models: appliance timing

Evening appliance electricity peak, by diary source

Real diaries

Generated diaries

Reweight diaries

Neither synthetic source carries the country's timing

Where a country has no diaries, reweighted real diaries from comparable countries are the stronger default.
