

Note a. Direction (steering) was measured on the reported 7.30 B model, not inherited from the pilot: R-squared 0.9897 Spain held out, 0.9914 UK held out, 0.9941 Italy held out, against the registered floor of 0.80.

Note b. The amplitude slopes plotted here use the five-channel definition ruled in D-S6-13; the residual channel AC4-8 is excluded by name and is not counted toward these values.
