

Building Simulation publishes original, high quality, peer-reviewed research papers and review articles dealing with modeling and simulation of buildings including their systems. The goal is to promote the field of building science and technology to such a level that modeling will eventually be used in every aspect of building construction as a routine instead of an exception. Of particular interest are papers that reflect recent developments and applications of modeling tools and their impact on advances of building science and technology.

Instructions for Authors

- 1. Manuscript submission**
- 2. Manuscript preparation**
- 3. Manuscript structure and instruction**
- 4. Generative artificial intelligence (GenAI) tools**
- 5. Research data policy**
- 6. After acceptance**
- 7. Ethical responsibilities of authors**
- 8. Authorship principles**
- 9. Compliance with ethical standards**
- 10. Competing interests**
- 11. Additional information**

1. Manuscript submission

Legal requirements

Submission of a manuscript to *Building Simulation* implies: that the work described has not been published before; that it is not under consideration for publication anywhere else; that its publication has been approved by all co-authors, if any, as well as by the responsible authorities—tacitly or explicitly—at the institute where the work has been carried out. The publisher will not be held legally responsible should there be any claims for compensation.

Permissions

Authors wishing to include figures, tables, or texts that have already been published elsewhere (including the authors' own previous papers) are required to obtain permission from the copyright owner (the publisher of the journal, not the authors of the paper) and to state clearly in the figure/table caption or other appropriate locations in the manuscript that such permission has been obtained. For example: (author(s), year; reproduced with permission, © Copyright-holder Copyright-year). Any content received without such evidence will be assumed to originate from the authors. It is the authors' responsibility to retain an electronic or hardcopy of the permission.

How to submit

Authors should submit their articles to the journal online at <http://www.editorialmanager.com/buil>. A wide range of submission file formats for text and illustrations is supported by the system. However, manuscripts are preferably be submitted in Word format. All source files uploaded by the authors will be automatically compiled into a single PDF file at the end of submission process.

Building Simulation follows **double blind reviewing process**. To accelerate the editorial process, we would like to ask you to upload the entire manuscript **without any author information and acknowledgements** (if any) in the text (**Blinded Manuscript**). Furthermore, please upload a separate file (**Title Page**), containing a cover letter, title, all author information (in correct order), affiliations, e-mail address of correspondence, author contributions statement, conflicts of interest statement, and acknowledgements (if any).

2. Manuscript preparation

Language

The journal's language is English. Either British English or American English spelling and terminology may be used, but the system chosen should be followed consistently throughout the article. We request that the language is corrected before submission. Submissions with unsatisfactory English will be rejected without review.

Editing services

All manuscripts are subject to copy editing.

Length of paper

There is no strict limit on the length of a manuscript. Nevertheless, authors are asked to make the manuscripts as concise as possible and to limit them to less than 40 manuscript pages (12-point font, typed in double space). The space required for the figures and tables should be calculated on the basis of their final printed size. Generally, the total number of tables should be less than 5 and the total number of figures should be less than 15.

3. Manuscript structure and instruction

Building Simulation follows double blind reviewing process. The authors are required to submitted two separated files, (1) Title page including author related information; (2) Blinded Manuscript without any author information and acknowledgements (if any). Please note: the supporting material to the manuscript will be reviewed by the reviewer. Any author information should be removed from the supporting data.

1) Title page

The title page should include:

- A cover letter to the Editor-in-Chief explaining why the paper is significant
- A concise and informative title
- The name(s) of the author(s) in correct order
- The affiliation(s) and address(es) of the author(s)
- The e-mail address of the corresponding author
- **Author contributions statement**
- **Compliance with ethical standards: Declaration of competing interest and Ethical approval**
- **Acknowledgements (if any):** acknowledgements of people, grants, funds, etc. should be placed in a separate section on the title page. The names of funding organizations should be written in full.

Author Contributions. Authors are encouraged to include a statement that specifies the contribution of every author to the research and preparation of the manuscript. Please refer to the "**Authorship principles**" section below for more information on how to complete this section.

Example statement:

“All authors contributed to the study conception and design. Material preparation, data collection and analysis were performed by [full name], [full name] and [full name]. The first draft of the manuscript was written by [full name] and all authors commented on previous versions of the manuscript. All authors read and approved the final manuscript.”

Declaration of competing interest. Authors are required to disclose financial or non-financial interests that are directly or indirectly related to the work submitted for publication. Please refer to “**Competing interests**” section below for more information on how to complete this section. Please note: If no conflict exists and no ethics approval required, the authors should state:

Compliance with ethical standards

Declaration of competing interest The authors have no competing interests to declare that are relevant to the content of this article.

Ethical approval This study does not contain any studies with human or animal subjects performed by any of the authors.

2) Blinded manuscript

Abstract

Please provide one paragraph containing a complete but concise description of your work in 100–250 words. The abstract should consist of motivation, problem statement, approach, results, and conclusions in order to make the paper appealing to more readers. Since the abstract is indexed in many databases it should be self-contained without any undefined abbreviations or any cited references.

Keywords

Please provide 4 to 6 keywords which can be used for indexing purposes.

Text formatting

For submission in Word

- Use a normal, plain font (e.g. 12-point Times Roman), double space line, and one column for text.
- Use the automatic page numbering function to number the pages.
- Do not add line numbers in your manuscript. The online submission system will build each submission into a PDF file with line numbers, from 1–66 (for portrait layout) and 1–50 (for landscape layout).
- Do not use field functions.
- Use tab stops or other commands for indents, not the space bar.
- Use the table function, not spreadsheets, to make tables.
- Use the equation editor or MathType for equations.

Note: If you use Word 2007 (or higher version), do not create the equations with the default equation editor but use MathType instead.

Footnotes

Essential footnotes to the text should be numbered consecutively and placed at the bottom of the page to which they refer. Footnotes to tables should be indicated by superscript lower-case letters (or asterisks for significance values and other statistical data).

Formulae and symbols

Formulae, symbols and all subscripts, superscripts, Greek letters, and other characters must be legible and carefully checked. Standard mathematical notation should be used. All symbols used in manuscript must be explained. A list of symbols should follow the abstract if such a list is needed. All equations must be numbered.

Single letters that denote mathematical constants, variables, and unknown quantities should be set in italic type in text and in equations. Numerals, operators, and punctuation should be set in Roman type (upright), as are commonly defined functions or abbreviations, e.g., cos, det, e or exp, lim, log, max, min, sin, tan, d (for derivative) should also be upright. Vectors, tensors, and matrices should be set in bold italic.

Heading levels (numbered)

Please use the decimal system of headings with no more than three levels.

Figures

- *Building Simulation* publishes all figures and illustrations in color and free of charge when deemed necessary.
- The preferred figure formats is PDF, PNG, or JPEG with minimum resolution of 600dpi relative to the final figure size.
- All figures are to be numbered using Arab numerals.
- Figure parts should be denoted by lowercase letters.
- Figures should always be cited in text in consecutive numerical order.
- For each figure, please supply a figure caption.
- Make sure to identify all elements found in the figure in the caption.
- Identify any previously published material by giving the original source in the form of a reference at the end of the caption. Please note authors wishing to include figures, tables, or texts that have already been published elsewhere (including the authors' own previous papers) are required to obtain permission from the copyright owner (the publisher of the journal, not the authors of the paper) and to state clearly in the figure/table caption or other appropriate locations in the manuscript that such permission has been obtained. For example: (author(s), year; reproduced with permission, © Copyright-holder Copyright-year). Any content received without such evidence will be assumed to originate from the authors. It is the authors' responsibility to retain an electronic or hardcopy of the permission.

Tables

- All tables are to be numbered using Arab numerals.
- Tables should always be cited in text in consecutive numerical order.
- For each table, please supply a table heading. The table title should explain clearly and concisely the components of the table.
- Identify any previously published material by giving the original source in the form of a reference at the end of the table heading. Please note authors wishing to include figures, tables, or texts that have already been published elsewhere (including the authors' own previous papers) are required to obtain permission from the copyright owner (the publisher of the journal, not the authors of the paper) and to state clearly in the figure/table caption or other appropriate locations in the manuscript that such permission has been obtained. For example: (author(s), year; reproduced with permission, © Copyright-holder Copyright-year). Any content received without such evidence will be assumed to originate from the authors. It is the authors' responsibility to retain an electronic or hardcopy of the permission.
- Tables should not duplicate results presented elsewhere in the manuscript (for example, in graphs).

Units and abbreviations

Abbreviations should be used only if deemed absolutely necessary, and should be defined at first mention in the abstract and again in the main body of the text and used consistently thereafter.

Please adhere to internationally agreed standards such as those defined by the International Organization of Standardization (ISO). Metric SI units should be used throughout except where non-SI units are more common [e.g. liter (L) for volume].

Appendices

If there are two or more appendices, they should be numbered consecutively. Equations in appendices should be designated differently from those in the main body of the paper, e.g. (A1), (A2) etc. In each appendix equations should be numbered separately.

References

The list of references should only include works that are cited in the text and that have been published or accepted for publication. Personal communications and unpublished works should only be mentioned in

the text. Do not use footnotes or endnotes as a substitute for a reference list.

Citation in text

Cite references in the text by *name* and *year* in parentheses. Some examples:

- Negotiation research spans many disciplines (Thompson 1990)
- This result was later contradicted (Becker and Seligman 1996)
- Negotiation research spans many disciplines (Thompson 1990a, b)

List style

Reference list entries should be alphabetized by the last names of the first author of each work.

(a) Journal article

Harris M, Karper E, Stacks G, et al. (2001). Writing labs and the Hollywood connection. *Journal of Film Writing*, 44: 213–245.

(b) Book (authored)

Calfee RC, Valencia RR (1991). *APA Guide to Preparing Manuscripts for Journal Publication*. Washington, DC: American Psychological Association.

(c) Book chapter

O'Neill JM, Egan J (1992). Men's and women's gender role journeys: Metaphor for healing, transition, and transformation. In: Wainrib BR (ed), *Gender Issues Across the Life Cycle*. New York: Springer. pp. 107–123.

(d) Paper presented at a conference

Phelan JC, Link BG, Stueve A, et al. (1996). Have public conceptions of mental health changed in the past half century? Does it matter? Paper presented at the 124th Annual Meeting of the American Public Health Association, New York.

(e) Paper in proceedings

Mahdavi A, Spasojevic B (2007). Incorporating simulation into building systems control logic. In: *Proceedings of the 10th International Building Performance Simulation Association Conference and Exhibition (BS2007)*, Beijing, China, pp.1175–1181.

(f) Thesis or Dissertation

Yang X (1999). Study of building material emissions and indoor air quality. PhD Thesis, Massachusetts Institute of Technology, USA.

(g) Newspaper article

Di Rado A (1995). Trekking through college: classes explore modern society using the world of Star Trek. *Los Angeles Times*, 1995, March 15, p. A3.

(h) Patent

Dong J, Martin S, Waldo P (2002). Method and system for dynamically presenting cluster analysis results. US Patent, US6380937B1, 2002-3-30.

(i) Non-English publication

Jiang Y, Li Z, Chen X, et al. (2004). Liquid desiccant air-conditioning system and its applications. *Journal of HV&AC*, 34(11): 88–97. (in Chinese)

(j) Article by DOI

Slifka MK, Whitton JL (2000). Clinical implications of dysregulated cytokine production. *Journal of Molecular Medicine*, <https://doi.org/10.1007/s001090000086>.

(k) Online document

Doe J (1999). Title of subordinate document. In: *The dictionary of substances and their effects*. Royal Society of Chemistry. Available at <http://www.rsc.org/dose/title>. Accessed 15 Jan 1999.

Electronic supplementary material (ESM)

If ESM is submitted, it will be published as received from the author in the online version only. ESM may

consist of

- information that cannot be printed: animations, video clips, sound recordings;
- information that is more convenient in electronic form: sequences, spectral data, etc.;
- large amounts of original data, e.g., additional tables, illustrations, etc.;
- if supplying any ESM, the text must make specific mention of the material as a citation, similar to that of figures and tables (e.g., "...as shown in Animation 3.").

4. Generative artificial intelligence (GenAI) tools

Building Simulation follows the [COPE position statement](#) and the [Ethical and Practical Guidelines for the Use of Generative AI in the Publication Process](#) released by STM regarding the use of generative artificial intelligence (GenAI) tools. For everyone who may be involved in the academic publication, *Building Simulation* adopts below policies and will continuously monitor the development and adjust or refine this policy when appropriate.

Generative AI images

The fast moving area of generative AI image creation has resulted in novel legal copyright and research integrity issues. As publisher, we strictly follow existing copyright law and best practices regarding publication ethics. While legal issues relating to AI-generated images and videos remain broadly unresolved, Building Simulation unable to permit its use for publication.

For authors

- GenAI should not be listed or cited as an author or co-author.
- GenAI cannot be used to create, alter, or manipulate original research data and images.
- GenAI can be used to help authors in formatting, language editing, and correcting. Authors should disclose the use of GenAI at submission.

Example of such statement is shown below:

Declaration of generative AI and AI-assisted technologies in the writing process

During the preparation of this work, the authors used Grammarly and ChatGPT to improve readability and detect spelling/grammar mistakes. After using this tool/service, the authors reviewed and edited the content as needed and took full responsibility for the content of the publication.

- Any undisclosed use of GenAI is possibly considered as misbehavior.

For peer reviewers

- GenAI should not be used to create a review of a paper.
- Manuscripts under review, including supplementary material, should never be uploaded to publicly available GenAI services.
- If the peer reviewers suspect undisclosed use of GenAI by the authors, they should inform the Editorial Office.

5. Research data policy

The journal encourages authors, where possible and applicable, to deposit data that support the findings of their research in a public repository. Authors and editors who do not have a preferred repository should consult Springer Nature's list of repositories and research data policy.

- [List of Repositories](#)
- [Research Data Policy](#)

General repositories—for all types of research data—such as Figshare and Dryad may also be used. Datasets that are assigned digital object identifiers (DOIs) by a data repository may be cited in the reference list. Data citations should include the minimum information recommended by DataCite: authors,

title, publisher (repository name), identifier. For example:

Hao Z, AghaKouchak A, Nakhjiri, et al. (2014). Global integrated drought monitoring and prediction system (GIDMaPS) data sets. *figshare*. <http://dx.doi.org/10.6084/m9.figshare.853801>.

- [DataCite](#)

Springer Nature provides a research data policy support service for authors and editors, which can be contacted at researchdata@springernature.com.

This service provides advice on research data policy compliance and on finding research data repositories. It is independent of journal, book and conference proceedings editorial offices and does not advise on specific manuscripts.

- [Helpdesk](#)

6. After acceptance

Copyright

Authors will be asked to transfer copyright of the article to the Publisher (or grant the Publisher exclusive publication and dissemination rights). This will ensure the widest possible protection and dissemination of information under copyright laws.

Proof reading

The purpose of the proof is to check for typesetting errors and the completeness and accuracy of the text, tables and figures. Substantial changes in content, e.g., new results, corrected values, title and authorship, are not allowed without the approval of the Editor.

Online first

The articles will be published online after receipt of the corrected proofs. This is the official first publication citable with the DOI. After release of the printed version, the paper can also be cited by issue and page numbers.

After online publication, further changes can only be made in the form of an Erratum, which will be hyperlinked to the article.

7. Ethical responsibilities of authors

This journal is committed to upholding the integrity of the scientific record. As a member of the Committee on Publication Ethics (COPE), the journal will follow the COPE guidelines on how to deal with potential acts of misconduct.

Authors should refrain from misrepresenting research results which could damage the trust in the journal, the professionalism of scientific authorship, and ultimately the entire scientific endeavor. Maintaining integrity of the research and its presentation is helped by following the rules of good scientific practice, which include:

- The manuscript should not be submitted to more than one journal for simultaneous consideration.
- The submitted work should be original and should not have been published elsewhere in any form or language (partially or in full), unless the new work concerns an expansion of previous work. (Please provide transparency on the re-use of material to avoid the concerns about text-recycling ('self-plagiarism').)
- A single study should not be split up into several parts to increase the quantity of submissions and submitted to various journals or to one journal over time (i.e., 'salami-slicing/publishing').
- Concurrent or secondary publication is sometimes justifiable, provided certain conditions are met. Examples include: translations or a manuscript that is intended for a different group of readers.
- Results should be presented clearly, honestly, and without fabrication, falsification or inappropriate data manipulation (including image based manipulation). Authors should adhere to discipline-specific rules for acquiring, selecting and processing data.

- No data, text, or theories by others are presented as if they were the author's own ('plagiarism'). Proper acknowledgements to other works must be given (this includes material that is closely copied (near verbatim), summarized and/or paraphrased), quotation marks (to indicate words taken from another source) are used for verbatim copying of material, and permissions secured for material that is copyrighted.

Important note: the journal may use software to screen for plagiarism.

- Authors should make sure they have permissions for the use of software, questionnaires/(web) surveys and scales in their studies (if appropriate).
- Research articles and non-research articles (e.g., Research, Review, and Comment Articles) must cite appropriate and relevant literature in support of the claims made. Excessive and inappropriate self-citation or coordinated efforts among several authors to collectively self-cite is strongly discouraged.
- Authors should avoid untrue statements about an entity (who can be an individual person or a company) or descriptions of their behavior or actions that could potentially be seen as personal attacks or allegations about that person.
- Research that may be misapplied to pose a threat to public health or national security should be clearly identified in the manuscript (e.g., dual use of research). Examples include creation of harmful consequences of biological agents or toxins, disruption of immunity of vaccines, unusual hazards in the use of chemicals, weaponization of research/technology (amongst others).
- Authors are strongly advised to ensure the author group, the Corresponding Author, and the order of authors are all correct at submission. Adding and/or deleting authors during the revision stages is generally not permitted, but in some cases may be warranted. Reasons for changes in authorship should be explained in detail. Please note that changes to authorship cannot be made after acceptance of a manuscript.

Upon request authors should be prepared to send relevant documentation or data in order to verify the validity of the results presented. This could be in the form of raw data, samples, records, etc. Sensitive information in the form of confidential or proprietary data is excluded.

If there is suspicion of misbehavior or alleged fraud the Journal and/or Publisher will carry out an investigation following COPE guidelines. If, after investigation, there are valid concerns, the author(s) concerned will be contacted under their given e-mail address and given an opportunity to address the issue. Depending on the situation, this may result in the Journal's and/or Publisher's implementation of the following measures, including, but not limited to:

- If the manuscript is still under consideration, it may be rejected and returned to the author.
- If the article has already been published online, depending on the nature and severity of the infraction:
 - an erratum/correction may be placed with the article,
 - an expression of concern may be placed with the article,
 - or in severe cases retraction of the article may occur.

The reason will be given in the published erratum/correction, expression of concern or retraction note. Please note that retraction means that the article is maintained on the platform, watermarked "retracted" and the explanation for the retraction is provided in a note linked to the watermarked article.

- The author's institution may be informed.
- A notice of suspected transgression of ethical standards in the peer review system may be included as part of the author's and article's bibliographic record.

Fundamental errors

Authors have an obligation to correct mistakes once they discover a significant error or inaccuracy in their published article. The author(s) is/are requested to contact the Journal and explain in what sense the error is impacting the article. A decision on how to correct the literature will depend on the nature of the error. This may be a correction or retraction. The retraction note should provide transparency which parts of the article are impacted by the error.

Suggesting/excluding reviewers

Authors are welcome to suggest suitable reviewers and/or request the exclusion of certain individuals when they submit their manuscripts. When suggesting reviewers, authors should make sure they are totally independent and not connected to the work in any way. It is strongly recommended to suggest a mix of reviewers from different countries and different institutions. When suggesting reviewers, the Corresponding Author must provide an institutional email address for each suggested reviewer, or, if this is not possible to include other means of verifying the identity such as a link to a personal homepage, a link to the publication record or a researcher or author ID in the submission letter. Please note that the Journal may not use the suggestions, but suggestions are appreciated and may help facilitate the peer review process.

8. Authorship principles

These guidelines describe authorship principles and good authorship practices to which prospective authors should adhere to.

Authorship clarified

The Journal and Publisher assume all authors agreed with the content and that all gave explicit consent to submit and that they obtained consent from the responsible authorities at the institute/organization where the work has been carried out, before the work is submitted.

The Publisher does not prescribe the kinds of contributions that warrant authorship. It is recommended that authors adhere to the guidelines for authorship that are applicable in their specific research field. In absence of specific guidelines it is recommended to adhere to the following guidelines.

All authors whose names appear on the submission

- made substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data; or the creation of new software used in the work;
- drafted the work or revised it critically for important intellectual content;
- approved the version to be published; and
- agree to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

Disclosures and declarations

All authors are requested to include information regarding sources of funding, financial or non-financial interests, study-specific approval by the appropriate ethics committee for research involving humans and/or animals, informed consent if the research involved human participants, and a statement on welfare of animals if the research involved animals (as appropriate).

The decision whether such information should be included is not only dependent on the scope of the Journal, but also the scope of the article. Work submitted for publication may have implications for public health or general welfare and in those cases it is the responsibility of all authors to include the appropriate disclosures and declarations.

Data transparency

All authors are requested to make sure that all data and materials as well as software application or custom code support their published claims and comply with field standards. Please note that journals may have individual policies on (sharing) research data in concordance with disciplinary norms and expectations.

Role of the Corresponding Author

One author is assigned as Corresponding Author and acts on behalf of all co-authors and ensures that questions related to the accuracy or integrity of any part of the work are appropriately addressed.

The Corresponding Author is responsible for the following requirements:

- ensuring that all listed authors have approved the manuscript before submission, including the names and order of authors;
- managing all communication between the Journal and all co-authors, before and after publication;

- providing transparency on re-use of material and mention any unpublished material (for example manuscripts in press) included in the manuscript in a cover letter to the Editor;
- making sure disclosures, declarations and transparency on data statements from all authors are included in the manuscript as appropriate (see above).

Author contributions

In absence of specific instructions and in research fields where it is possible to describe discrete efforts, the Publisher recommends authors to include contribution statements in the work that specifies the contribution of every author in order to promote transparency. These contributions should be listed at the separate title page.

Examples of such statement(s) are shown below:

- Free text:

All authors contributed to the study conception and design. Material preparation, data collection and analysis were performed by [full name], [full name] and [full name]. The first draft of the manuscript was written by [full name] and all authors commented on previous versions of the manuscript. All authors read and approved the final manuscript.

- Conceptualization: [full name], ...; Methodology: [full name], ...; Formal analysis and investigation: [full name], ...; Writing - original draft preparation: [full name, ...]; Writing - review and editing: [full name], ...; Funding acquisition: [full name], ...; Resources: [full name], ...; Supervision: [full name],...

For **review articles** where discrete statements are less applicable a statement should be included who had the idea for the article, who performed the literature search and data analysis, and who drafted and/or critically revised the work.

For articles that are based primarily on **the student's dissertation or thesis**, it is recommended that the student is usually listed as principal author.

Affiliation

The primary affiliation for each author should be the institution where the majority of their work was done. If an author has subsequently moved, the current address may additionally be stated. Addresses will not be updated or changed after publication of the article.

Changes to authorship

Authors are strongly advised to ensure the correct author group, the Corresponding Author, and the order of authors at submission. Changes of authorship by adding or deleting authors, and/or changes in Corresponding Author, and/or changes in the sequence of authors are not accepted after acceptance of a manuscript.

Please note that author names will be published exactly as they appear on the accepted submission!

Please make sure that the names of all authors are present and correctly spelled, and that addresses and affiliations are current.

Adding and/or deleting authors at revision stage are generally not permitted, but in some cases it may be warranted. Reasons for these changes in authorship should be explained. Approval of the change during revision is at the discretion of the Editor-in-Chief. Please note that journals may have individual policies on adding and/or deleting authors during revision stage.

Author identification

Authors are recommended to use their ORCID ID when submitting an article for consideration or acquire an ORCID ID via the submission process.

Deceased or incapacitated authors

For cases in which a co-author dies or is incapacitated during the writing, submission, or peer-review process, and the co-authors feel it is appropriate to include the author, co-authors should obtain approval from a (legal) representative which could be a direct relative.

Authorship issues or disputes

In the case of an authorship dispute during peer review or after acceptance and publication, the Journal will not be in a position to investigate or adjudicate. Authors will be asked to resolve the dispute themselves. If they are unable the Journal reserves the right to withdraw a manuscript from the editorial process or in case of a published paper raise the issue with the authors' institution(s) and abide by its guidelines.

Confidentiality

Authors should treat all communication with the Journal as confidential which includes correspondence with direct representatives from the Journal such as Editors-in-Chief and/or Handling Editors and reviewers' reports unless explicit consent has been received to share information.

9. Compliance with ethical standards

To ensure objectivity and transparency in research and to ensure that accepted principles of ethical and professional conduct have been followed, authors should include information regarding sources of funding, potential conflicts of interest (financial or non-financial), informed consent if the research involved human participants, and a statement on welfare of animals if the research involved animals.

Authors should include the following statements (if applicable) in a separate section entitled "Compliance with Ethical Standards" when submitting a paper:

- Disclosure of potential conflicts of interest
- Research involving Human Participants and/or Animals
- Informed consent

Please note that standards could vary slightly per journal dependent on their peer review policies (i.e., single or double blind peer review) as well as per journal subject discipline. Before submitting your article, check the instructions following this section carefully.

The corresponding author should be prepared to collect documentation of compliance with ethical standards and send if requested during peer review or after publication.

The Editors reserve the right to reject manuscripts that do not comply with the above-mentioned guidelines. The author will be held responsible for false statements or failure to fulfill the above-mentioned guidelines.

10. Competing interests

Authors are requested to disclose interests that are directly or indirectly related to the work submitted for publication. Interests within the last 3 years of beginning the work (conducting the research and preparing the work for submission) should be reported. Interests outside the 3-year time frame must be disclosed if they could reasonably be perceived as influencing the submitted work. Disclosure of interests provides a complete and transparent process and helps readers form their own judgments of potential bias. This is not meant to imply that a financial relationship with an organization that sponsored the research or compensation received for consultancy work is inappropriate.

Editorial Board Members and Editors are required to declare any competing interests and may be excluded from the peer review process if a competing interest exists. In addition, they should exclude themselves from handling manuscripts in cases where there is a competing interest. This may include – but is not limited to – having previously published with one or more of the authors, and sharing the same institution as one or more of the authors. Where an Editor or Editorial Board Member is on the author list they must declare this in the competing interests section on the submitted manuscript. If they are an author or have any other competing interest regarding a specific manuscript, another Editor or member of the Editorial Board will be assigned to assume responsibility for overseeing peer review. These submissions are subject to the exact same review process as any other manuscript. Editorial Board Members are welcome to submit papers to the journal. These submissions are not given any priority over other manuscripts, and Editorial Board Member status has no bearing on editorial consideration.

Interests that should be considered and disclosed but are not limited to the following:

Funding: Research grants from funding agencies (please give the research funder and the grant number) and/or research support (including salaries, equipment, supplies, reimbursement for attending symposia,

and other expenses) by organizations that may gain or lose financially through publication of this manuscript.

Employment: Recent (while engaged in the research project), present or anticipated employment by any organization that may gain or lose financially through publication of this manuscript. This includes multiple affiliations (if applicable).

Financial interests: Stocks or shares in companies (including holdings of spouse and/or children) that may gain or lose financially through publication of this manuscript; consultation fees or other forms of remuneration from organizations that may gain or lose financially; patents or patent applications whose value may be affected by publication of this manuscript.

It is difficult to specify a threshold at which a financial interest becomes significant, any such figure is necessarily arbitrary, so one possible practical guideline is the following: "Any undeclared financial interest that could embarrass the author were it to become publicly known after the work was published."

Non-financial interests: In addition, authors are requested to disclose interests that go beyond financial interests that could impart bias on the work submitted for publication such as professional interests, personal relationships or personal beliefs (amongst others). Examples include, but are not limited to: position on editorial board, advisory board or board of directors or other type of management relationships; writing and/or consulting for educational purposes; expert witness; mentoring relations; and so forth.

Primary research articles require a disclosure statement. Review articles present an expert synthesis of evidence and may be treated as an authoritative work on a subject. Review articles therefore require a disclosure statement. Other article types such as editorials, book reviews, comments (amongst others) may, dependent on their content, require a disclosure statement. If you are unclear whether your article type requires a disclosure statement, please contact the Editor-in-Chief.

Please note that, in addition to the above requirements, funding information (given that funding is a potential competing interest (as mentioned above)) needs to be disclosed upon submission of the manuscript in the peer review system. This information will automatically be added to the Record of CrossMark, however it is not **added to** the manuscript itself. Under 'summary of requirements' (see below) funding information should be included in the '**Declarations**' section.

Summary of requirements

The above should be summarized in a statement and placed in a 'Declarations' section in the **Title page** under a heading of 'Funding' and/or 'Competing interests'. Other declarations include Ethics approval, Consent, Data, Material and/or Code availability and Authors' contribution statements.

Please see the various examples of wording below and revise/customize the sample statements according to your own needs.

When all authors have the same (or no) conflicts and/or funding it is sufficient to use one blanket statement.

Examples of statements to be used when funding has been received:

- Partial financial support was received from [...]
- The research leading to these results received funding from [...] under Grant Agreement No[...].
- This study was funded by [...]
- This work was supported by [...] (Grant numbers [...] and [...])

Examples of statements to be used when there is no funding:

- The authors did not receive support from any organization for the submitted work.
- No funding was received to assist with the preparation of this manuscript.
- No funding was received for conducting this study.
- No funds, grants, or other support was received.

Examples of statements to be used when there are interests to declare:

- Financial interests: Author A has received research support from Company A. Author B has received a speaker honorarium from Company Wand owns stock in Company X. Author C is consultant to

company Y.

- Non-financial interests: Author C is an unpaid member of committee Z.
- Financial interests: The authors declare they have no financial interests.
- Non-financial interests: Author A is on the board of directors of Y and receives no compensation as member of the board of directors.
- Financial interests: Author A received a speaking fee from Y for Z. Author B receives a salary from association X. X where s/he is the Executive Director.
- Non-financial interests: none.
- Financial interests: Authors A and B declare they have no financial interests. Author C has received speaker and consultant honoraria from Company M and Company N. Dr. C has received speaker honorarium and research funding from Company M and Company O. Author D has received travel support from Company O.
- Non-financial interests: Author D has served on advisory boards for Company M and Company O.

Examples of statements to be used when authors have nothing to declare:

- The authors have no relevant financial or non-financial interests to disclose.
- The authors have no competing interests to declare that are relevant to the content of this article.
- All authors certify that they have no affiliations with or involvement in any organization or entity with any financial interest or non-financial interest in the subject matter or materials discussed in this manuscript.
- The authors have no financial or proprietary interests in any material discussed in this article.

Authors are responsible for correctness of the statements provided in the manuscript. See also Authorship Principles. The Editor-in-Chief reserves the right to reject submissions that do not meet the guidelines described in this section.
